QUIZ 15 - ICS 415 Fall 2017

Today we started covering the third chapter of the ASP.NET textbook. Answer the following fill-in-the-blank questions.

1. A tag that defines an HTML element that has no content and no end tag is called a/an _____ tag.
2. When an HTML document is displayed in a browser, HTML _____ elements flow to the right of the elements that precede them.
3. In contrast to HTML div elements, the HTML5 _____ elements show the structure of an HTML document.
4. In a modern web application, the HTML _____ elements and span elements should only be used when there isn't a more appropriate element for identifying or structuring the content.
5. An _____ style is created by coding a style attribute for an HTML element.
6. When you use an external style sheet, you code a/an _____ element in the head section of the HTML to identify the style sheet.
7. One benefit of using external style sheets is that you separate the _____ of the content from the content.
8. When you code an ID selector for a CSS rule set, the ID must be preceded by the _____ character.
9. To define a CSS rule set, you code one or more _____ within the braces of the rule set.
10. To apply a CSS rule set with a class selector to an ASP.NET server control, you code the class name in the _____ attribute of the control.
